

COGPEM18

Remove components from electrical process plant and equipment

Overview

This unit is about your competence in removing electrical components. You will be required to identify, remove, check the condition, mark and store for further use. You will be following your organisation's safe working practices and working within the work permit procedures.

This unit deals with the following:

- 1 Remove components from electrical process plant and equipment

During this work you must take account of the relevant installation procedures and safe working practices AS THEY APPLY TO YOU.

Previous Version:

Adapted from Unit E2.5 of Process Engineering Maintenance NOS – version February 2004. This unit is a contextualised version of a unit produced by the OSC Eng Engineering Competence Standards which was originally designated ECS 5.03.

COGPEM18

Remove components from electrical process plant and equipment

Performance criteria

- You must be able to:*
- P1 work safely at all times, complying with health and safety and other relevant regulations and guidelines
 - P2 establish, and where appropriate, mark component orientation for re-assembly
 - P3 ensure that any stored energy or substances are released safely and correctly
 - P4 remove the required components using approved tools and techniques
 - P5 take suitable precautions to prevent damage to components, tools and equipment during removal
 - P6 check the condition of the removed components and record those that will require replacing
 - P7 label and store the removed components in an appropriate location
 - P8 store or discard the removed components in accordance with approved procedures
 - P9 maintain documentation in accordance with organisational requirements

COGPEM18

Remove components from electrical process plant and equipment

Knowledge and understanding

You need to know and understand:

- K1 you must have a working knowledge and understanding of what your responsibilities are in respect of health, safety and environment. This should include the limits of your personal responsibility, your legal responsibility for your own health and safety and the health and safety of others
- K2 you must have a working knowledge of the relevant regulations and the safe working practices and procedures required within your work area
- K3 you must have an appreciation of the engineering drawings and related specifications to which you will be expected to work, including: technical drawings (component, assembly, general arrangements, isometrics, 1st and 3rd angle projections), method statements and product worksheets, tolerances
- K4 you must have working knowledge of what the types of component removal methods and techniques, i.e. isolations and connections, are that have to be made, and which tools, equipment and methods can be used to remove specific components from specific products/assets
- K5 you must have an appreciation of how to assess and identify the condition of removed components
- K6 you must have working knowledge of how to label and store components for re-use including the marking systems for specific components and connections
- K7 you must have an appreciation of how to dispose of unwanted components and substances. This should include what substances could be released during the removal of components, which risks are associated with the release of substances, and where to access information on the environmental standards, including an appreciation on COSHH, SEPA and company procedures
- K8 you must have an appreciation of what your responsibilities are for ensuring the care and security of tools and equipment that you use
- K9 you must have an appreciation of your responsibilities with regard to the reporting lines and procedures in your working environment

Additional Information

Scope/range related to performance criteria

- 1 The level and extent of responsibility in the context of this standard, extends to working with a detailed specification, varying techniques and activities and applying appropriate methods to achieve the best possible result in the conditions applying. You will be accountable for the integrity of the work site and ensuring the work is recorded in a formal manner albeit you will be expected to refer to others. Authorisation for proceeding with the work will be given by authorised signatories within the Permit to Work system
- 2 The Equipment to be worked on will be operational assets and should include:
 - 2.1. Rotating equipment and tools
 - 2.2. Protection methods
 - 2.3. Electrical distribution systems
- 3 The type of components to be removed may be robust or fragile. Robust components are those which are resistant to most forms of damage or disruption during their working lives

Fragile components are those which are easily disrupted or damaged. Damage or disruption could be due to physical, chemical or other forces (e.g. Electro-magnetic)
Typical robust components could be:
 - 3.1. Components of power/lighting transmission
 - 3.2. Motors/components of motors
 - 3.3. Components of process control systems
 - 3.4. Heat exchangers
 - 3.5. Components of electrical back-up systems
Typical fragile components could be:
 - 3.6. Components of electrical circuit protectors
 - 3.7. Electrical meter devices
 - 3.8. Circuit boards
 - 3.9. Safety/protection devices
 - 3.10. Components of electrical panels
- 4 Removal techniques or procedures to be followed

The components to be removed may require a sequential series of steps to complete the removal. The component may be difficult to access and may be surrounded by other fragile/valued components and may need

COGPEM18

Remove components from electrical process plant and equipment

specialised tooling requirements. Removal may involve more than 1 differing technologies and/or involve a significant number of fragile components

The specifications to which a candidate would be expected to work to could include:

- 4.1. Product worksheets
 - 4.2. Technical drawings (components, assembly, general arrangement, isometrics)
 - 4.3. Method statements
 - 4.4. Maintenance schedules
- 5 The removal operations will be simple. Simple removal of components refers to situations where the component is quickly and easily removed from its position. Typical examples could include lifting out of plug-in components and undoing threaded fasteners to release the component

Scope/range related to knowledge and understanding

The Knowledge and Understanding levels expressed indicate the minimum level of knowledge and understanding sufficient to perform your role in a manner that would normally be associated with the minimum acceptable performance of a competent person undertaking your role.

The expression “an appreciation” is intended to indicate a level of knowledge and understanding equating to:

- 1 An awareness of the existence, the scope and the background to the content covered by the knowledge and understanding statement
- 2 How and where to find further detail and information that you will need
- 3 Having obtained the information, you will be expected to check your interpretation and then to be able to apply it to your situation

The expression “working knowledge and understanding” indicates you are able to:

- 4 Identify and apply relevant information, procedures and practices to your usual role in your expected working environments needing only occasional recourse to reference materials
- 5 Describe, in your own words, the principles underlying your working methods. This does not mean the ability to quote “Chapter and verse”. Rather you must know what supporting information is available, how and where to find it and from whom to seek further guidance and information confirm any additional required detail
- 6 Interpret and apply the information obtained to your role, your working practice and in your expected working environment

COGPEM18

Remove components from electrical process plant and equipment

Developed by Cogent

Version number 1

Date approved May 2010

Indicative review date May 2012

Validity Current

Status Adapted

Originating organisation Cogent

Original URN E2.5

Relevant occupations Engineering Professionals; Engineering and manufacturing technologies; Manufacturing technologies

Suite Process Engineering Maintenance

Key words electrical equipment, removal, components, check, condition, mark, store
