
Overview

This standard is about diagnosing and rectifying faults occurring in the motorcycle combustion engine mechanical, electrical and hydraulic and fluid systems. This standard does not include gearbox, clutch and final drive which are covered in another standard.

In this standard the term 'motorcycle' includes motorcycles, scooters, mopeds and motorcycle-derived vehicles with three or four wheels (such as quad bikes) on which the rider sits.

IMIMC07

Diagnose and rectify motorcycle combustion engine and component faults

Performance criteria

You must be able to:
