## Overview

This standard covers inspecting plant and apparatus in the power utilities environment. This includes preparing and undertaking the work.

To meet this standard you will be able to:

- follow the processes and procedures to complete work in line with the organisational quality assurance and operating specifications
- work safely using appropriate tools and equipment
- inspect plant and apparatus making sure it meets operational requirements

You will demonstrate a safety conscious approach to the control of hazards associated with the activity whilst working and communicating effectively with other team members to achieve tasks.

This standard is suitable for a crafts person or technician working independently in the power utilities environment, taking personal responsibility for their own actions and for the quality and accuracy of the work carried out.

EUSEPUS007

Inspect plant and apparatus in the power utilities environment
