
Overview

This standard is for those who monitor and implement the provision of nutrients to crops or plants, outdoors or in protected conditions, including any setting, whether amenity horticulture (green roofs, parks and gardens, sportsturf, etc.) or crop production (fruit, vegetables, trees, etc.).

This standard covers the co-ordination of your own workload and in some instances it may involve co-ordinating the work of teams.

You will require considerable knowledge of the principles of plant growth and development as well as plant health.

If you are working with machinery, equipment or chemicals you should be trained, and hold the current certification where required, in accordance with the relevant legislation.

When carrying out your work you must consider the impact it will have on the environment, and work towards preserving and improving habitats and biodiversity and responding to and mitigating the effects of climate change.

LANH15

Monitor and implement the provision of nutrients to crops or plants

Performance criteria

You must be able to:
