

Overview

This standard covers the cutting of glass. The glass has to be cut at the site of the glazing installation or in the workshop in order to show that the glazier can meet the requirements of the glazing installation. The glazier has to handle and manoeuvre the glass following safe working practices. The glass must be cut accurately and in a way that minimises waste.

This standard is for you if you cut glass on site or in the workshop that will be used for glazing work
