
Overview

This standard identifies the competences you need to assist in conducting maintenance on marine auxiliary power units such as shaft driven, diesel, self-contained steam turbine, back-pressure steam turbine and gas turbine generators, without complete removal of the unit(s) for overhaul. You will be required to maintain a range of marine auxiliary power unit items, such as pipework, turbo blowers, gearboxes, air intakes, combustion system, engine control units, fuel injectors, fuel pipes, fire detection systems, exhaust units, sea water cooling pumps, feed water extraction pumps, turbine rotors, lubricating oil coolers and other associated equipment, in accordance with approved procedures. This will involve dismantling, removing and replacing faulty equipment, at unit or component level, on a variety of marine auxiliary power units and equipment assemblies.

You will be expected to apply a range of dismantling and assembling methods and techniques, such as proof marking to aid reassembly, dismantling components requiring pressure or expansion/contraction techniques, setting, aligning, adjusting and torque loading components, and making 'off-load' checks before starting up the maintained equipment.

Your responsibilities will require you to comply with organisational policy and procedures for the maintenance activities undertaken and to report any problems with these activities, or with the tools and equipment used, that you cannot personally resolve or are outside your permitted authority, to the relevant people. You must ensure that all tools, equipment and materials used in the maintenance activities are removed from the work area on completion of the activities and that all necessary job/task documentation is completed accurately and legibly. You will be expected to work with either a high level of supervision or as a member of a team. You will take personal responsibility for your own actions and for the quality and accuracy of the work that you carry out. When working in a team, you must demonstrate a significant personal contribution to the team activities in order to satisfy the requirements of the standard and competence in all the areas required by the standard must be demonstrated.

Your underpinning knowledge will be sufficient to provide a sound basis for your work and will enable you to adopt an informed approach to applying mechanical maintenance procedures to marine auxiliary power units. You will have an understanding of dismantling and reassembly methods and procedures and their application. You will know how the equipment functions, and the purpose of individual components, in adequate depth to provide a sound basis for carrying out any repair or adjustment. In addition, you will have sufficient knowledge of these components to ensure that they are fit for purpose and meet the specifications, thus providing a sound basis for carrying out reassembly.

You will understand the safety precautions required when carrying out the marine maintenance activities, especially those for isolating the equipment. You will also

understand your responsibilities for safety, and the importance of taking the necessary safeguards to protect yourself and others in the workplace, both ashore and afloat.

Performance criteria

You must be able to:

1. work safely at all times, complying with health and safety and other relevant regulations, directives and guidelines
2. follow the relevant maintenance schedules to carry out the required work
3. carry out the maintenance activities within the limits of your personal authority
4. carry out the maintenance activities in the specified sequence and in an agreed time scale
5. report any instances where the maintenance activities cannot be fully met or where there are identified defects outside the planned schedule
6. complete relevant maintenance records accurately and pass them on to the appropriate person
7. dispose of waste materials in accordance with safe working practices and approved procedures

Knowledge and understanding

You need to know and understand:

1. the health and safety requirements of the area in which the marine maintenance activity is to take place and the responsibility these requirements place on you 2. the isolation and lock-off procedure, or permit-to-work procedure that applies 3. the specific health and safety precautions to be applied during the marine maintenance procedure and their effects on others 4. hazards associated with carrying out maintenance activities on marine auxiliary power units and equipment (such as explosive fumes, rules on smoking, handling oils, greases, stored pressure/force, misuse of tools, using damaged or badly maintained tools and equipment, not following laid-down maintenance procedures) 5. how to recognise and deal with emergencies and the procedures to be followed (such as methods of safely evacuating and closing down compartments in the case of fire or other major incident) 6. how to recognise and deal with emergencies (including methods of safely evacuating and closing down of compartments in the case of fire or other major incident and methods of first aid, fire fighting and resuscitation of personnel) 7. the importance of wearing protective clothing and other appropriate safety equipment (PPE) during the maintenance process 8. how to obtain and interpret information from job instructions, drawings, specifications, manufacturers' manuals and other documents needed in the maintenance process 9. the methods and techniques used to dismantle/assemble mechanical equipment (such as release of pressures/force, proof marking, extraction, pressing, alignment) 10. methods of checking that components are fit for purpose, how to identify defects and wear characteristics, and the need to replace 'lived' items (such as seals and gaskets) 11. the basic principles of how the equipment functions, its operating sequence, the working purpose of individual units/components and how they interact 12. the uses of measuring equipment (such as micrometers, verniers and other measuring devices) 13. how to make adjustments to components/assemblies to ensure that they function correctly (such as setting working clearance, setting travel, setting backlash in gears, preloading bearings) 14. the identification and application of different types of locking devices 15. the importance of making 'off-load' checks before running the equipment under power 16. how to check that tools and equipment are free from damage or defects, are in a safe, tested and usable condition and are configured correctly for the intended purpose 17. why tool/equipment control is critical and what to do if a tool or piece of equipment is unaccounted for on completion of the activities 18. the importance of completing the relevant documentation and/or reports following the maintenance activity 19. the equipment operating and control procedures to be applied during the maintenance activity 20. how to use lifting and handling equipment in the maintenance activity 21. the problems that can occur when carrying out maintenance on marine auxiliary power units and what to do if they occur 22. the organisational procedure(s) to be adopted for the safe disposal of waste of all types of materials 23. the extent of your own authority and whom you should report to if you have a problem that you cannot resolve

Scope/range related to performance criteria

1. Carry out all of the following during the maintenance of the marine auxiliary power units:
 1. undertake the maintenance activities, in conjunction with others involved, to cause minimal disruption to normal working
 2. use the correct issue of drawings, job instructions and procedures
 3. adhere to risk assessment, COSHH and other relevant safety standards
 4. check that equipment has been safely isolated (such as mechanical, electricity, gas, air or fluids)
 5. maintain safe access and working arrangements for the maintenance area
 6. carry out the maintenance activities, using appropriate techniques and procedures
 7. help to re-connect and return the system to service, on completion of activities
 8. leave the work area in a safe condition and to the prescribed category of cleanliness
2. Carry out maintenance activities on one of the following types of marine auxiliary power units:
 1. gas turbine generator
 2. ICE 2-stroke mechanically/turbine/naturally aspirated generator
 3. ICE 4-stroke mechanically/turbine/naturally aspirated generator
 4. steam turbine generator
3. Carry out maintenance activities on eight of the following auxiliary power unit components:
 1. air intake
 2. extraction pump
 3. turbine nozzle box
 4. air charger (blower)
 5. sea water pump
 6. lubricating oil cooler
 7. combustion system
 8. fuel system
 9. feed controller
 10. gas turbine rotor
 11. air ejector

12. lubricating oil pump
13. engine monitoring unit
14. fuel pump
15. gland vapour condenser
16. fire extinguishing system
17. exhaust system
18. gland sealing
19. steam turbine rotor
20. air start system
21. condenser
22. gearbox
23. governor gear
24. fresh water cooler

4. Carry out all of the following maintenance activities:

1. dismantling equipment to the appropriate level
2. setting, aligning and adjusting components
3. proof marking/labelling of components
4. checking components for serviceability
5. replacing damaged/defective components
6. tightening fastenings to the required torque
7. replacing all 'lived' items (such as seals, gaskets)
8. replenishing oils and greases
9. making 'off-load' checks before starting up
10. functionally testing the completed system

5. Maintain marine auxiliary power units and equipment, in accordance with one of the following standards:

1. BS, EN or ISO standards and procedures
2. company standards and procedures
3. specific system requirements
4. customer (contractual) standards and requirements
5. recognised compliance agency/body's standards
6. other accepted international standards

6. Complete the relevant paperwork, to include one of the following and pass it to the appropriate people:

1. job cards
2. maintenance log or report
3. permit to work/formal risk assessment
4. other specific reporting method

Behaviours

You will be able to apply the appropriate behaviours required in the workplace to meet the job profile and overall company objectives, such as:

- strong work ethic
- positive attitude
- team player
- dependability
- responsibility
- honesty
- integrity
- motivation
- commitment

SEMME2038

Carrying out maintenance on marine auxiliary power units for electrical power generation

Developed by	Enginuity
Version Number	2
Date Approved	28 Feb 2018
Indicative Review Date	01 Feb 2021
Validity	Current
Status	Original
Originating Organisation	Semta
Original URN	SEMME2038
Relevant Occupations	Engineering, Engineering and Manufacturing Technologies
Suite	Marine Engineering Suite 2
Keywords	Engineering; marine; maintain; maintenance; auxiliary power; electrical; power generation; diesel oil; steam turbine; gas turbine
